

Welcome to Model Maker Systems

Software developed for technical- and land-surveying, engineering, mining, town-planning, landscaping, quantity surveying, irrigation design and construction. Survey calculations and diagrams, digital terrain / ground modelling, CAD, Contouring, Earthworks, Road-, Sewer-, Stormwater-, Irrigation-design and Volume calculations are only a little of what we offer. Model Maker Systems is committed to the development of the highest quality software in the fields of surveying, engineering, mining, town-planning, landscaping, quantity survey, irrigation design and construction. Development guided by user demand and the highest standard of support has made Model Maker Systems software the leader in its field. Although software development started as early as 1982, Model Maker Systems was established in 1989. Since then the Model Maker, Road Maker and Pipe Maker suite of survey and engineering software were developed to become the leader in its field of application. At the end of 2004 the development of Survey Maker started. Currently our software is used by many South African and international companies - see productivity counter at top right. The software is developed with the aim of providing users with an easy to use high productivity tool, using the latest software development tools available, and with close co-operation from users. A commitment to outstanding user support has made Model Maker Systems a leader in the field of survey, engineering and construction software development. The programs consist of individual modules. Users need to purchase only the modules required for their application.

Suggested lowest price configuration options for our software - (VAT incl. in SA rands) : - Surveyors : (Model Maker 1,2,6) - R 6030.00 / (Survey Maker 1,2) - R 5310.00 - Consulting Engineers / Contractors : (Model Maker 1-4,6,11) - R 12600.00 & (Road Maker 1,3) - R 5310.00 & (Pipe Maker 1,2,3) - R 5310.00
